Ear keloids are notoriously difficult to treat, as surgical removal (excision) may lead to recurrent keloid scar formation up to 80 percent of the time. Recurring keloids may even be larger than the original keloid scar. The likelihood of recurrence is not affected by the person's age, gender, keloid size or location.

## **Ear Keloids | Children's Hospital of Philadelphia**

What causes keloids on ears? The occurrence of keloid scars on the ears, or any other part of the body, is often as a result of a skin injury. In most instances, they are as a result of an ear piercing. The piercing triggers an abnormal stimulation of collagen build-up leading to their appearance. They can also form due to: Burns; Surgery
