Heat transfer is the exchange of thermal energy between physical systems. The rate of heat transfer is dependent on the temperatures of the systems and the properties of the intervening medium through which the heat is transferred. The three fundamental modes of heat transfer are conduction, convection and radiation.

Heat and mass transfer page 4 • Heat is an energy flow, defined -impervious systemsby (1) just for the case of mass (i.e. $Q \equiv W_{\text{adiab}} - W$). When there are simultaneous energy and mass flows, heat flow must be considered at a surface with no net mass flow. • Heat input to a system, may not
