REST Query API is used for different purpose from the above. REST API is to get, create, update, and delete on a specific object, and REST Query API is to search data. Search formula or keywords are needed to search. By sending those in the specified format, NSO searches data and we can obtain the result. For REST Query API, we use the below URI.

REST API Basics - Cisco Community
The Viptela software provides a REST API, which is a programmatic interface for controlling, configuring, and monitoring the Viptela devices in an overlay network. You access the REST API through the vManage web server. A REST API is a web service API that adheres to the REST, or Representational State Transfer, architecture.

Using the vManage REST APIs - Viptela Documentation
This change is going to require Cisco engineers to become proficient in programming, and the most common programming language for SDN is the Python programming language.
