$f(z)$, then any continuous function $f(z)$ on the complex plane such that $\int_{\gamma} f(z) dz = 0$ for all circles of radius r_1 and r_2 is analytic, by a theorem of L. Zalcman. There is an analogous result for harmonic functions and the mean value property. According to a theorem of J. Delsarte, if $r_1, r_2 > 0$ are such that $r_2 = r_1$ is not the quotient of two complex numbers for

Complex analysis was made, in part, to compute definite and indefinite integrals. So having a book that does not teach you how to use the residue theorem to compute an integral is doing you a disservice. This is another reason why books like Rudin's Real and Complex Analysis are not good first choices for textbooks.
